

Machine Vision Technology Ltd.

Real Vision for the Real World

Case Study - Label and date verification

- Can you control the **CORRECT DATE** on the right product in the right place at the right time?
- Are you risking unacceptable fines?

The Product Date Verifier reads the date and the Bar Code to cross check the date **VALIDITY** for that product. Ensuring it meets the customer's expectations.

MVT are now using their reliable OCR techniques for label verification. After over 20 successful installations at Premier Foods where MVT can read the codes, on the top of shiny cans, at any orientation, with speeds of up to 1800 per minute. MVT now use the same technology to check expiry dates printed on labels, using dates from a factory system or an equation the customer may use.

- End of line installation with flashing alarm beacon to indicate mismatch.
- Output to halt production available.
- Output for production reject divert available, with option of divert gate mechanism.
- Quick easy installation without disruption to production.
